

Antarctica is where the South Pole is.

Even in summer, most of Antarctica is under an ice sheet.

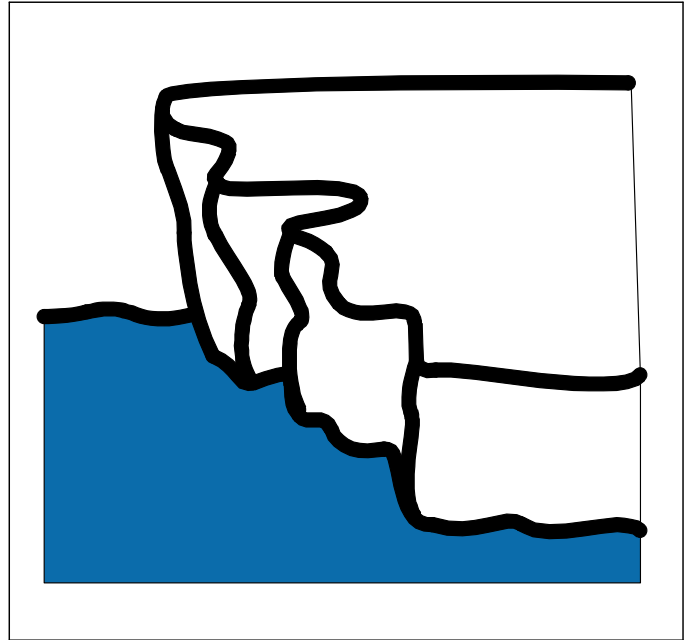

The sea round Antarctica is called the Southern Ocean.

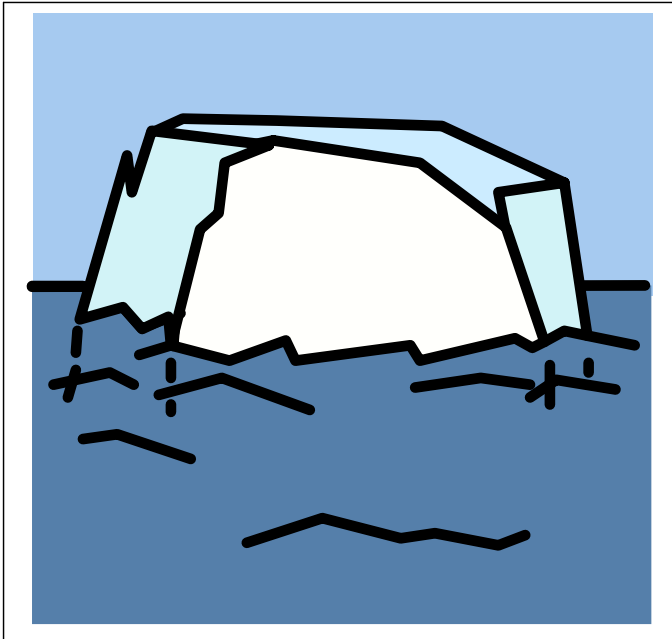

A glacier is like a river of ice.

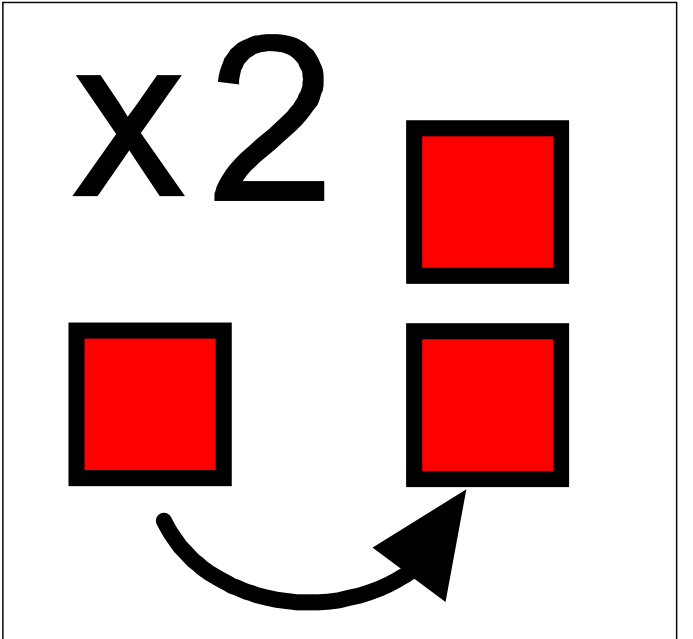

A crevasse is
a deep crack in the ice.

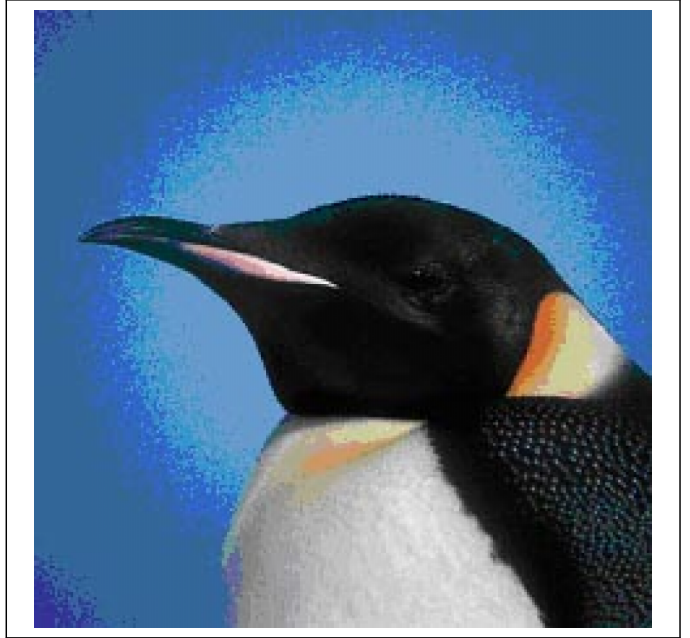

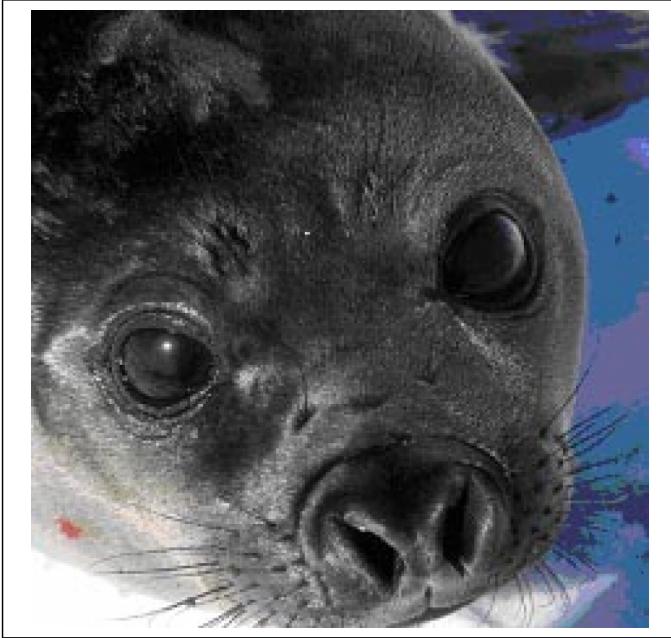

A glacier breaks off.
It is called an ice shelf.

This broke off an ice shelf.
It is floating. It is an iceberg.

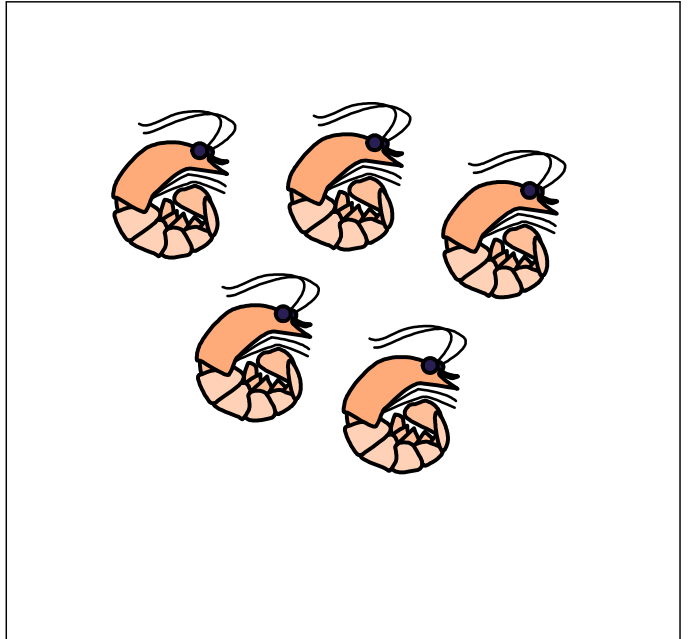

Antarctica is bigger
in the winter because
the sea freezes.

This has fat and fur
to stay warm.
The baby grows quickly.

This bird cannot fly
but it swims well.

This animal can click.
This helps it to find its prey.

Tiny krill are food for
the huge blue whale.
Krill look like shrimps.

You can drive this
in Antarctica.

You must protect your eyes
from the brightness.

You must wear lots of clothes
to stay warm.

Now, men can use

telecommunications there.
